Recommendations

- Angular is a framework. It has a ton of stuff built in, and it's not limited just to rendering views.
- Enterprises that build large scale applications need to focus on a lot more than just the view layer, that's why there are so many things you need to learn and you should learn to master Angular.
- Refer angular official website to learn Angular
<https://angular.io/>
- Build as many projects as you can while learning as it will give you good understanding of all the concepts that you have learnt- **that is the best way to understand the concept.**

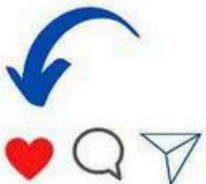

Hope you liked it.
